

Hi everyone,

I'm Sai Disha D, a first year Master of Engineering Student majoring in Artificial Intelligence and Machine Learning at the Manipal School of Information Sciences, MAHE. Originally hailing from Bangalore, Karnataka, I'm reaching out to share a bit more about myself and explore potential collaborations at Global Technology Solutions.

In the tech domain, my interests lie in AI, ML, NLP, and coding. Feel free to check out some of my projects on my GitHub:

<https://github.com/disha1997>

and connect with me on LinkedIn:

<https://www.linkedin.com/in/sai-disha-d-4908a827b/>

I've been working on anomaly detection in time series data as part of my master's project. Interestingly, this led me to extend the code to address the water scarcity problems we consistently face in Udupi. The focus has been on detecting anomalous water wastage to contribute towards a more sustainable solution.

Beyond the binary world, I have a penchant for exploration. As a travel enthusiast, I find joy in discovering new places and cultures. During my downtime, you'll catch me immersed in a compelling book, trying my hand at the keyboard, or exploring thought-provoking documentaries.

Given the chance, I'm eager to contribute my skills to address real-world challenges. Aligning with this, I've ranked my preferences for the UN Sustainable Development Goals:

1. Portable Water
2. Renewable Energy
3. Mobility and Transportation
4. Health Innovation
5. Food Security

I believe technology can play a pivotal role in these areas.

I'd be delighted to discuss potential opportunities and how my skill set could complement the projects at Global Technology Solutions, and I look forward to the possibility of working with you all.

Best regards:
